Power Consumption Grows Above 13% in Oct

New Delhi: India's power consumption grew 13.38% to 110.94 billion units (BU) in October this year, mainly driven by buoyancy in industrial and commercial activities, as per government data. Electricity consumption in the country was recorded at 97.84 BU in October 2019. — PTI

...for all months, which is 96% of those for all of October 2019, GSTN data showed. Earnings from the freight traffic of major commodities stood at Rs 10,405.12 crore, 9% higher than the year earlier. "This indicates recovery which is dependent on festival-related spending, which was anticipated," said DK Srivastava, chief policy advisor at EY. "Whether it will sustain or not will depend on these numbers being repeated for the next two months." Aditi Nayar, principal economist at ratings agency ICRA, was circumspect. "We remain as yet unconvinced on the persistence of this trend after the festive season is over, after the pent-up demand is fulfilled," she said. However, industry was upbeat. "These incremental trends are heartening and need to be sustained, and further initiatives like the consumption vouchers must continue to remain focused on demand generation," said Fici president Sangita Reddy. "Given the progressive policies introduced by the government, major infrastructure development plans in place, large consumer market, all point towards significant headroom for growth."

GST BREAK-UP
October revenue from import of goods was 9% higher from a year ago while that from domestic transactions, including import of services, rose 11%.
